

Installation - Wizard

1. Copy all the files form "**MailCarry.3.0.3**" folder and past it to the **root directory** of your domain
2. Access the url in browser with /install/
Eg. If *example.com* is a domain then *example.com/install/*

Now you will need to set the *writable(0777)* permission **recursively** for the following directories and files:

1. **.env**
2. **/storage**
3. **/bootstrap/cache**

Following data will be ask while installation:
